

Closure-based decoder logic

$$\tilde{\mathbf{u}} = \mathbf{u}_{\text{ref}} + \mathbf{V}\mathbf{q} + \overline{\mathbf{V}}\mathcal{F}(\mathbf{q}, \boldsymbol{\mu}, t)$$

Basis and coordinate partition

$$\mathbf{V}_{\text{tot}} = \begin{bmatrix} \mathbf{V} & \overline{\mathbf{V}} \end{bmatrix}$$

$$\mathbf{q}_N = \begin{bmatrix} \mathbf{q} \\ \overline{\mathbf{q}} \end{bmatrix}$$

Retained contribution

Nonlinear closure

Discarded-space contribution
